Meetings and Dates

Purpose	Start	End
<p>https://www.fisheries.noaa.gov/event/october-2021-marine-fisheries-advisory-committee-meeting</p> <p>The May 2022 meeting continued the theme of building resilient fisheries, and MAFAC members completed two deliverables. The meeting was convened to hear presentations, receive updates, and discuss NOAA and NMFS priorities; a national seafood strategy outline; aquaculture development; the NOAA Climate, Ecosystems, and Fisheries Initiative; offshore wind development and survey mitigation; outcomes from the recently held National Saltwater Recreational Fisheries Summit; the NOAA Fisheries draft Equity and Environmental Justice Strategy; and budget outlook. A number of activities were organized to provide MAFAC members the opportunity to meet with the Caribbean Fishery Management Council executive director and members from across Puerto Rico and the U.S. Virgin Islands, as well as two Puerto Rico fishing cooperatives to learn about their fisheries and resiliency issue. There was also a site visit to a Saltonstall-Kennedy Grant-funded queen conch aquaculture hatchery managed by one fishing cooperative in Naguabo Bay. MAFAC received, discussed, and approved the final report of its Recreational Electronic Reporting Task Force, Critical Considerations for Implementing Electronic Reporting Methods in Recreational Fisheries. This report provides recommendations on five areas to NOAA to guide the development and implementation of a roadmap for the use of electronically reported recreational fishing data from private anglers. This report is the culmination of a two-year effort on the part of a Task Force of experts that reviewed literature, gathered input from other experts, and discussed a plethora of topics on electronic reporting in support of NOAA's mission and sustainable recreational fisheries management. Also at the May 2022 meeting, MAFAC approved a resolution related to workforce development needs of fisheries and seafood industries. The resolution encourages NOAA to conduct local needs assessments of all industries linked to fishing and seafood production and distribution and to employ its regional assets, including the National Sea Grant Extension Program Network, to accomplish it. MAFAC members planned to continue to work on workforce, training, and education issues through the end of 2022. MAFAC members also organized a small working group to review and develop comments and recommendations on the NOAA Fisheries draft Equity and Environmental Justice Strategy. MAFAC was pleased to receive reports and presentations from Janet Coit, ex officio member and assistant Administrator of Fisheries; Paul Doremus, Deputy Assistant Administrator for Operations; Sam Rauch, Deputy Assistant Administrator for Regulations; Jon Hare, Acting Director of Scientific Programs and Chief Scientific Advisory; Russ Dunn, Senior Recreational Fisheries Advisor; Jennifer Lukens, Director of the Office of Policy and the Designated Federal Officer to MAFAC; and Heidi Lovett, Alternate Designated Federal Officer to MAFAC.</p>	10/12/2021	10/14/2021
<p>https://www.fisheries.noaa.gov/event/may-2022-marine-fisheries-advisory-committee-meeting</p> <p>MAFAC held a one-day virtual meeting in August 2022 to discuss and consider draft comments and recommendations on NOAA Fisheries' draft Equity and Environmental Justice Strategy. Jennifer Lukens, Director of the Office of Policy and the Designated Federal Officer to MAFAC, and Heidi Lovett, Alternate Designated Federal Officer to MAFAC were in attendance. There was extensive and thoughtful debate as different perspectives were brought to the table during discussion. Members acknowledged that the topic itself and the issues raised can sometimes be difficult to discuss and trigger emotional responses. The group worked through these issues, learned from each other, developed comments and recommendations that focus on the national perspective of the strategy, noting that future implementation plans may have regional differences and perspectives. The final comments and recommendations were unanimously endorsed by all Members in attendance and transmitted to NOAA Fisheries leaders.</p>	05/10/2022	05/12/2022

20a. How does the Committee accomplish its purpose?

MAFAC advises the Secretary of Commerce on policies and guidance for stewardship of the Nation's living marine resources. The Under Secretary of Commerce for Oceans and Atmosphere (or designee) and the Assistant Administrator for Fisheries actively participate and identify topics for deliberation by the Committee that are timely and relevant to the Secretary.

MAFAC in return provides recommendations to the Secretary and the National Oceanic and Atmospheric Administration (NOAA) regarding policies, regulations, and programs that are the responsibility of the Department. As a national advisory group, MAFAC provides a public forum where candid discussions on complex issues of resource management and science can occur. During these discussions, various options and concerns are examined, objectives identified, and mutual understanding developed. MAFAC provides input from a wide variety of constituencies that improve the agency's knowledge regarding what will be supported as well as what will be controversial.

20b. How does the Committee balance its membership?

For 50 years, MAFAC has maintained a diverse group of professional and academic expert members who represent regional, tribal, and national perspectives on living marine resources. The current composition of the Committee balances gender, ethnic, geographic, and sectoral representation and includes expertise in aquaculture; seafood and trade; commercial, recreational, subsistence fishing, and related industries; natural resource and protected species management; environmental issues; and social, economic, and biological sciences. Balance is maintained by holding widely announced open nominations when vacancies occur. Partner organizations and stakeholder groups receive nomination announcements and are asked to widely distribute it, they are posted to the NOAA Fisheries website, distributed through NOAA Fisheries' weekly e-Newsletter (reaching 64,700 in September 2022), and these announcements are usually shared through trade new outlets. In

FY2022, during an open nomination process, the agency received the most diverse pool of applicants (self-identified) in our history. The Under Secretary of Commerce for Oceans and Atmosphere and the Department's Assistant Administrator for Fisheries serve as ex officio members to the Committee. The executive directors of the Atlantic, Gulf of Mexico, and Pacific Interstate Fisheries Commissions serve as non-voting ex officio members, as well. All members are recognized leaders in their field and contribute a wide-range of knowledge and experience. The caliber of the membership is exemplified by the fact that periodically, members of MAFAC must step down because they are nominated by their governors and appointed by the Secretary to serve on the regional fishery management councils. Similarly, some applicants wishing to serve on MAFAC have past experience serving on regional fishery management councils.

20c. How frequent and relevant are the Committee Meetings?

As required by the Charter, the full Committee meets at least twice each calendar year in person or virtually, as needed. Topics for consideration on the agenda are derived from a mix of Department of Commerce (DOC) and NOAA current or forthcoming issues put forth by the agencies, as well as timely and relevant topics suggested or requested by MAFAC members. MAFAC continues to make policy recommendations on key programs and legislative initiatives that address the science and management of fisheries and protected species and emerging issues facing NOAA Fisheries. The detailed presentations and discussions that comprise all MAFAC meetings is necessary to support the thoughtful and deliberative work of the Committee. In FY2022,

MAFAC held three meetings, two by webinar and one in-person since the start of the COVID-19 pandemic). We were pleased to be able to re-schedule an in-person meeting scheduled for April 2020 in Puerto Rico and hold it in May 2022. Virtual meetings were held in October 2021 and August 2022. During all meetings, MAFAC members gathered input from external experts and discussed, considered, and finalized recommendations on several high level policy issues. Additionally, several of MAFAC's subcommittees met in-conjunction with full Committee meetings. Relevant, major topics and activities that the MAFAC members focused on in FY2022 included: (1) recreational fishery data and data gaps; (2) business, economic, and workforce development issues facing fisheries, aquaculture, and seafood business; (3) understanding the effectiveness of deterrents to limit interactions of marine mammals with fishing gear or aquaculture operations; and (4) providing thoughtful and robust comments on NOAA Fisheries' draft Equity and Environmental Justice Strategy. At the October 2021 meeting, MAFAC members met the new Assistant Administrator for NOAA Fisheries, Janet Coit and heard Administration priorities. They discussed the strategic plans of the Subcommittee on Aquaculture, climate science and the Next-Gen Data Acquisition Plan, and were provided status updates on the fiscal year (FY) 2022 budget outlook, operations, facilities, and workforce management issues. MAFAC discussed planning efforts for the 2022 Recreational Fisheries Summit and received a progress report on the MAFAC Recreational Electronic Reporting Task Force work, focused on the generation, delivery, and use of electronic private recreational angler self-reported data to assist NOAA Fisheries in fulfilling its mission activities. A large portion of the

October 2021 meeting was focused on building resilient fisheries, the seafood sector, and coastal communities reliant on marine resources. Members fleshed out a work plan to address these primary questions: (1) What is the current state of the fishing/seafood/aquaculture workforce, and what are the gaps that need to be filled or changes that need to be made to ensure their resilience and adaptability to changes in the climate/ecosystem and markets; and (2) Specifically, what can NOAA do to assist these industries in preparing for the future? This discussion led to the creation of a four part work plan for FY2022 work. The May 2022 meeting continued the theme of building resilient fisheries, and MAFAC members completed two deliverables. The meeting was convened to hear presentations, receive updates, and discuss NOAA and NMFS priorities; a national seafood strategy outline; aquaculture development; the NOAA Climate, Ecosystems, and Fisheries Initiative; offshore wind development and survey mitigation; outcomes from the recently held National Saltwater Recreational Fisheries Summit; the NOAA Fisheries draft Equity and Environmental Justice Strategy; and budget outlook. A number of activities were organized to provide MAFAC members the opportunity to meet with Caribbean Fishery Management Council members from across Puerto Rico and the U.S. Virgin Islands, as well as two Puerto Rico fishing cooperatives to learn about their fisheries and resiliency issue. There was also a site visit to a Saltonstall-Kennedy Grant-funded queen conch aquaculture hatchery managed by one fishing cooperative in Naguabo Bay. MAFAC received, discussed, and approved the final report of its Recreational Electronic Reporting Task Force, Critical Considerations for Implementing Electronic

Reporting Methods in Recreational Fisheries. This report provides recommendations on five areas to NOAA to guide the development and implementation of a roadmap for the use of electronically reported recreational fishing data from private anglers. This report is the culmination of a two-year effort on the part of a Task Force of experts that reviewed literature, gathered input from other experts, and discussed a plethora of topics on electronic reporting in support of NOAA's mission and sustainable recreational fisheries management. Also at the May 2022 meeting, MAFAC approved a resolution related to workforce development needs of fisheries and seafood industries. The resolution encourages NOAA to conduct local needs assessments of all industries linked to fishing and seafood production and distribution and to employ its regional assets, including the National Sea Grant Extension Program Network, to accomplish it. MAFAC members planned to continue to work on workforce, training, and education issues through the end of 2022. MAFAC held a one-day virtual meeting in August 2022 to discuss and consider draft comments and recommendations on NOAA Fisheries' draft Equity and Environmental Justice Strategy. There was extensive and thoughtful debate as different perspectives were brought to the table during discussion. Members acknowledged that the topic itself and the issues raised can sometimes be difficult to discuss and trigger emotional responses. The group worked through these issues, learned from each other, developed comments and recommendations that focus on the national perspective of the strategy, noting that future implementation plans may have regional differences and perspectives. The final comments and recommendations were unanimously endorsed by all Members in

attendance and transmitted to NOAA Fisheries leaders.

20d. Why can't the advice or information this committee provides be obtained elsewhere?

As a unique national advisory committee comprised of individuals with diverse expertise in the fields of living marine resource management and science or representing an important stakeholder group, MAFAC has proven to be an invaluable resource for NOAA, the Department, and Administration to identify common ground on which controversial and highly visible issues can move forward. MAFAC pre-dates FACA and is the oldest advisory body in NOAA, having advised on implementation of such landmark initiatives as the Law of the Sea and the original Fisheries Conservation and Management Act of 1976. It is the only FACA-chartered advisory committee with responsibility to "advise the Secretary on all living marine resources that are the responsibility of the Department of Commerce." Many marine resource management issues can be highly controversial and require a great deal of public transparency and consensus building. The MAFAC has become an increasingly useful asset for serving in this role, providing the agency and the Administration with a public sounding board to identify issues and develop strategies on which common ground and mutual agreement can be established. The focus of MAFAC and its Columbia Basin Partnership Task Force on watershed-wide salmon and steelhead issues is a good example of this. Their reports from this work (October 2020) have subsequently been used and influenced Agency and Administration efforts to rebuild salmon and steelhead in the Columbia River Basin (2022). While regional commissions and councils exist, MAFAC is the only national, open, transparent

organization that focuses on oceans policy and living marine resource stewardship from the unique perspective of stakeholders collaborating with the government to provide advice on national policy. MAFAC's work is always aimed at supporting the mission and goals of NOAA Fisheries, NOAA, and the Department of Commerce. MAFAC meetings are open to the public and tend to be well attended. The detailed and explanatory discussions of complex issues (that are not always articulated well in the media) provide the agency a degree of public education that is proving increasingly valuable. MAFAC provides a valuable and candid forum for the anticipated debates revolving around the implementation of ocean management initiatives.

20e. Why is it necessary to close and/or partially closed committee meetings?

N/A.

21. Remarks

MAFAC is a unique national advisory body with diverse expertise and member viewpoints on living marine resource conservation and management issues. NOAA and the Department of Commerce value MAFAC's policy advice and input on key marine resource issues, particularly controversial or challenging ones, as well as its open, transparent process.

Narrative Description

MAFAC is a national advisory body with diverse expertise and member viewpoints. As NOAA is a regulatory agency with responsibility for managing and sustaining living marine resources, many of the actions, decisions, and priorities of the agency are controversial. MAFAC provides an invaluable forum in which controversial and key issues can be discussed, mutual understanding developed, and common ground established for expanded public dialogue and debate. The value and importance of this role has increased in recent years as the Administration and the Department of Commerce seeks guidance and input on the contemporary challenges in its strategic plan: identifying new planning, management, science, and research in support of expanding aquaculture and other appropriate uses of offshore areas; amplifying the economic and social value of commercial and recreational fisheries while ensuring their sustainability; conserving and recovering protected species while supporting responsible fishing and resource development.

Cost Savings Comments

Although many MAFAC recommendations have been adopted by the agency, they normally take the form of general policy guidance, priorities, and advice, rather than specific regulatory or fisheries management actions for which benefit-cost computations are made. Members serve in a voluntary capacity, and a rough approximation of the value of the time directly donated through MAFAC and its task forces is on the order of \$200,000 -\$500,000 per year.

What is the approximate Number of recommendations produced by this committee for the life of the committee?

535

Number of Recommendations Comments

In FY2022, MAFAC finalized three deliverables, including two reports and one resolution. This resulted in 13 recommendations: 1) Critical Considerations for Implementing Electronic Reporting Methods in Recreational Fisheries (5 recommendation areas). This report provides recommendations to NOAA to guide the development and implementation of a roadmap for electronically reported recreational fishing data from private anglers. The recommendations covering 5 topics (5 recommendations): data standards; angler recruitment, retention, and innovation; voluntary or mandatory requirements; data verification; use of other statistical methods (census or model-based approaches) in addition to probability based sampling, the gold standard. 2) One recommendation encouraging NOAA to conduct local needs assessments of all industries linked to fishing and seafood production and distribution. 3) Endorsement of the draft NOAA Fisheries Equity and Environmental Justice (EEJ) Strategy, with recommendations in seven (7) areas: (1) explicitly acknowledging historical and ongoing harms and examples of

successful mitigation strategies developed within current law; (2) using an established equity framework to address all aspects of inequity; (3) clearly identify the expected benefits of the EEJ Strategy to underserved communities; (4) hold regional learning sessions; confront the structural issues in Fishery Management Councils leading to inequity and injustice; (6) develop implementation guidance for the regions; and (7) address inequities in research and data used in management.

What is the approximate Percentage of these recommendations that have been or will be Fully implemented by the agency?

65%

% of Recommendations Fully Implemented Comments

The final report and minutes of each meeting along with any advisory recommendations are distributed throughout the agency and target the appropriate staff responsible for the issue of focus. The 65 percent is based on the recent DFO's experience and is not a reflection of what has been implemented over the lifetime of the Committee. In FY2022 – approximately 65% of the Committee's recommendations were implemented or continue to be under consideration. In some cases, such as recommendations related to centering equity and environmental justice in all marine resource actions, MAFAC recommendations can influence the work of Fishery Management Councils, Commissions, and state agencies partners. As an example of the influence of past recommendations, the goals for restoring salmon and steelhead in the Columbia River Basin worked on during FY2017 through early FY2021, are supporting current work.

What is the approximate Percentage of these recommendations that have been or will be Partially implemented by the agency?

20%

% of Recommendations Partially Implemented Comments

This is an estimate. Some recommendations are individually very detailed and actionable; in other cases, an entire suite of recommendations may be more policy focused not fully implementable in the short or medium term. It is important to note that in some years, recommendations to interagency bodies are beyond the sole control and authority of NOAA and the Department of Commerce.

Does the agency provide the committee with feedback regarding actions taken to implement recommendations or advice offered?

Yes No Not Applicable

Agency Feedback Comments

At the beginning of each meeting, specific discussions, presentation, or recaps of what the agency has done with MAFAC recommendations is provided in response to the most recent reports transmitted by the Committee. In addition, members of MAFAC are briefed by subject matter experts at each meeting on progress and status of issues and questions raised by the Committee. Written reports, draft regulations, or policies are provided and discussed with the full Committee.

What other actions has the agency taken as a result of the committee's advice or recommendation?

	Checked if Applies
Reorganized Priorities	<input checked="" type="checkbox"/>
Reallocated resources	<input checked="" type="checkbox"/>
Issued new regulation	<input type="checkbox"/>
Proposed legislation	<input type="checkbox"/>
Approved grants or other payments	<input type="checkbox"/>
Other	<input checked="" type="checkbox"/>

Action Comments

MAFAC has served as a forum in which draft initiatives are candidly discussed in an open forum allowing for Committee input to be taken into consideration before the agency takes any formal action. The Committee provides advice and feedback to the agency on strategic priorities, formal guidance documents, draft regulations, as well as on elements related to public outreach, constituent communication, and 'marketing messages' for complicated and/or controversial issues.

Is the Committee engaged in the review of applications for grants?

No
